

## Historic Parkland Hospital Turns to Clarus in Facility Replacement

An all new Parkland Hospital in the heart of Dallas was a \$1.27 billion investment to upgrade and replace the original hospital built in 1954. The project was led by HDR+Corgan and features a master planned 64-acre facility with first class medical technology, a linear park and integrated public transit services.

When considering options for patient room and nurse station communications surfaces, HDR turned to Clarus and Healthboard as the perfect solution to match the design style of the space. The Parkland project included:

- Custom size Healthboards
- ColorDrop custom printed graphics
- TV panel integration
- A bacteria resistant writing surface
- Proven visual communication system which is easy to write on and promotes collaboration
